

EAM Enablement

Complete managed solution for Maximo

Asset management practices that rely on a patchwork of spreadsheets and manual processes ultimately lead to increasing costs, downtime and unreliable data.

Implementing an Enterprise Asset Management solution can solve these challenges but can be expensive and daunting for organisations without the skills or best practice insights.

EAM Enablement is a complete managed solution that brings IBM Maximo together with other best-of-breed tools and operational know-how in an integrated asset management ecosystem.

The Challenge

Under pressure to reduce downtime and operational costs, asset intensive organisations that rely on spreadsheets or outdated systems operating in isolation from each other will struggle to perform. Opportunities to operate faster and smarter are lost when manual processes can't embrace new technologies like mobility or IoT and decision making is undermined by incomplete or poor data quality.

Historically, implementing an enterprise asset management system within the existing IT environment has been a significant undertaking. Organisations with limited technical and operational expertise have struggled to succeed due to escalating costs, extended timeframes and poor user adoption.

How EAM Enablement can help

SKILLED PEOPLE

Leverage the team that brings technical skills and real-world experience together. Our people get asset management and share their knowledge to build solutions that deliver practical business outcomes.

INTEGRATED ASSET ECOSYSTEM

Improved asset performance needs the right strategy with the right tools. We bring it all together in an integrated asset ecosystem, with productivity accelerators to get you up and running quickly.

FULLY MANAGED SERVICE

EAM Enablement takes care of everything from licensing to support. You are free to choose where and how the solution is deployed - on-premises, data centre or private cloud hosting

Outcomes

Clarita has been working to help asset-intensive organisations optimise asset management systems and processes for over ten years. By combining a fully managed service for IBM Maximo with asset management best practice expertise, EAM Enablement has helped companies:

- reduce unplanned downtime
- improve operations through better asset availability & reliability
- improve return on assets and defer new purchases
- provide near real-time visibility into asset utilisation & performance
- unify processes across multiple sites.

Keep critical assets operating at maximum efficiency with IBM Maximo

With years of experience embedded in a toolset that will get you operational quickly, EAM Enablement is designed and configured to establish and grow the capabilities your business needs through an integrated asset management ecosystem.

Built on best practice standards and over 10 years cross-industry experience, EAM Enablement includes the tools, configurations and processes needed for fast, effective implementation. Leverage productivity accelerators including:

- Industry aligned data models
- Report dashboards
- Work order priorities and work types
- Start Centre configurations

Once operational, the focus turns to building an efficient, integrated asset management ecosystem – a single environment in which key asset management tools and expertise come together, with the integration know-how to work effectively with ERP and the broader business. Leverage expertise across the ecosystem with managed services to improve and expand on the EAM foundation.
