

# SAP S/4HANA READINESS ASSESSMENT

## Roadmap your journey from SAP ECC to SAP S/4HANA

The implementation from SAP ECC to SAP S/4HANA involves upgrading Enterprise Resource Planning (ERP) systems while simultaneously adopting a new database - a significant project that deserves careful planning that will impact your people, process, systems, and data.

COSOL provides the assessment and roadmap to guide you on this implementation journey. Our holistic approach will help determine what your organisation needs to focus on, ensuring alignment with your business objectives.

## PAIN POINTS

S/4HANA implementation will impact every component of your business. Here are some of the pain points organisations will need to resolve:

- Implementing a new ERP without the appropriate focus on the quality of data being migrated
- Finding the right balance of business input between SMEs and business area owners
- Understanding what solutions are required vs. what is available
- Current system processes/solutions that make business operations inefficient

## BENEFITS OF AN S/4HANA READINESS ASSESSMENT

Completing a readiness assessment is essential in the success of S/4HANA implementation. The outcome of the assessment provides an outline of activities needed to be done in order to resolve your pain points.

Some of the key advantages of undertaking an S/4HANA readiness assessment include:

- A clear roadmap regarding the data to be migrated
- A review of current system process to business process alignment, that identifies simplification requirements or solution re-design
- Analysis on current user adoption that will help determine license costs along with system, change management and training requirements
- Identifying IoT integrations that enable automation and predictive management opportunities

The end of support and maintenance of SAP ECC will occur in 2027.

With over two decades of rich industry and asset management systems experience in SAP, COSOL has the specific expertise in navigating the transition between SAP ECC and SAP

## INDUSTRIES WE WORK WITH:

Mining & Resources

Transport

Public Infrastructure

Utilities

Government

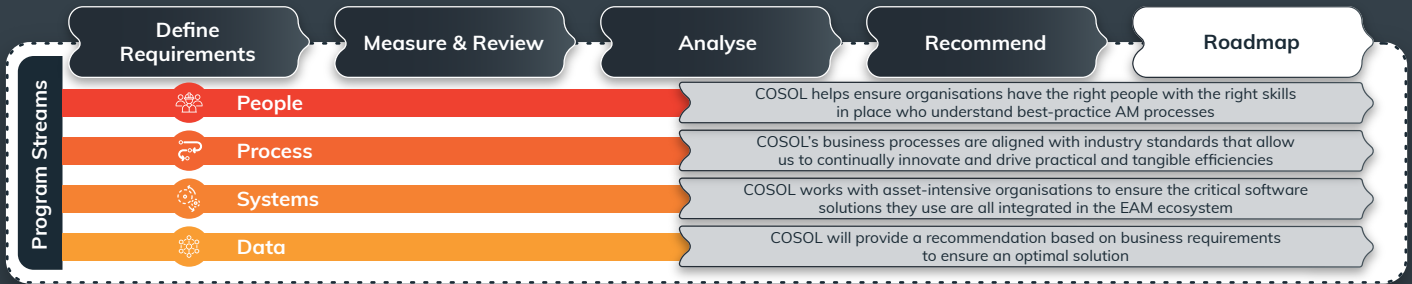

Construction & Engineering

# S/4HANA IMPLEMENTATION METHODOLOGY & DELIVERABLES

The COSOL methodology provides an impartial assessment on appropriate S/4 module selection, design requirements and potential 3rd party fit solutions across all four program streams.

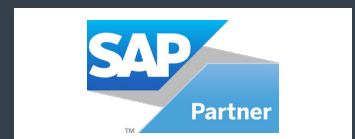

Below are the deliverables expected in an S/4HANA implementation that span across the People, Process, Systems and Data elements of your business.

PEOPLE	PROCESS	SYSTEMS	DATA
<ul style="list-style-type: none"> <li>Change Management Plan</li> <li>User licensing cost assessment</li> <li>Training assessment</li> </ul>	<ul style="list-style-type: none"> <li>System to process alignment</li> <li>Business process review</li> </ul>	<ul style="list-style-type: none"> <li>Solution assessment</li> <li>Simplification recommendations</li> <li>SAP module selection vs. 3<sup>rd</sup> party</li> </ul>	<ul style="list-style-type: none"> <li>Data cleansing recommendations</li> <li>Data migration plan</li> <li>Legacy data management recommendations</li> </ul>

## CERTIFIED SAP PARTNER:

COSOL is an SAP Partner and has been providing SAP solutions and consulting services to major industry sectors such as mining and defence since 2000.

## LEVERAGE OUR EXPERTISE

We are a global provider of asset management solutions for asset-intensive organisations that span across people, process, systems and data elements of the asset management framework to drive quantifiable business improvements.

We work collaboratively with clients from across the natural resources, energy and water, infrastructure, government and defence sectors to help them to achieve economic and sustainable improvements in their operations and supply chain.

We do this by utilising our signature solutions and proprietary software in combination with best-of-breed technologies and 22+ years industry, technical and functional expertise.
